Ideas with a future.

A World Full of Colour

FROM OLD TO NEW

Whether you are applying the first coat or renovating a surface, Baunit façade paints are always the right choice. High quality combined with intense colour shades and easy application make them a great all-rounder on your façade.

Protection & reliability

As well as their decorative properties, Baunit façade paints also fulfill an important protective function. They protect the façade from weather effects such as heat, rain and snow, as well as from unsightly dirt. Baunit NanoporColor even creates a dirt-resistant surface due to its innovative self-cleaning effect, which uses encapsulation and photocatalysis.

Beautiful & unique

Creative colour schemes with optional glitter or metallic effects for a professional and durable finish, can be produced on the façade with a coat of paint. Baunit has developed the widest and most beautiful range of façade colours in Europe. With 888 different colour shades, it offers almost complete freedom when it comes to façade design. From soft pastel tones to dark and intense colour shades or classic white tones.

Make the old new again

From sun-induced colour fading, to deep cracks and algal or fungal infestations, there are many different factors that can rob a façade of its initial shine and prevent it from functioning properly. Whatever the reason, Baunit has the right system solution for every situation. Starting with professional substrate preparation right through to the final coat of Baunit façade paint.

MINERAL (SILICATE)

- **NanoporColor**
- **SilikatColor**

These façade paints, based on mineral binders, are characterised by excellent breathability and water-vapour permeability. They allow moisture to escape to the outside, thereby playing their part in creating a breathable façade. Baumit NanoporColor also has a self-cleaning effect based on photocatalysis, providing extra active protection against organic dirt contamination.

WATER REPELLENCY (SILICON)

- **StarColor**
- **SilikonColor**

These façade paints, based on a silicone resin binder, offer a perfect combination of water repellency and good diffusion properties. The emphasis here is on stronger façade protection. This topcoat impresses as a result of its elasticity and resistance and is also universally applicable.

VARIETY OF COLOURS (SYNTHETIC RESIN)

- **PuraColor**
- **GranoporColor**

These façade paints provide intense shades combined with excellent UV resistance, colour brilliance and a wide range of colours. For dark and intense-coloured façade surfaces, CoolPigments technology also protects the external thermal insulation composite system from overheating.

Baumit Colour Range

ATTRACTIVE CHOICE

Choose the best quality and rely on Baumit Colour paints. Easy to apply, guaranteed colour fastness and extremely durable. The various types range from the self-cleaning NanoporColor, to the intense and dark colour shades of PuraColor and the breathable StarColor - Baumit offers all kinds of façade paints, now with even higher quality.

New recipe and better quality

With the new recipe, we have improved the performance of all Baumit paints to keep your façade beautiful and clean for a long time. With a thicker texture, our paints provide better coverage and your façade will be more resistant to abrasion and fading. All our paints are now also sprayable for use with professional applicators.

1 SELF-CLEANING & PHOTOCATALYSIS EFFECT

Through the use of nanotechnology, Baumit has succeeded in providing NanoporColor with special characteristics that protect the plaster surface from various organic environmental contaminants. The power of light combined with a new photocatalyst gives Baumit Nanopor an additional self-cleaning effect – for a façade that remains attractive, gleaming and clean for a long time.

2 AIRLESS SPRAYABLE

Due to the new recipe, all Baumit façade paints are now suitable for airless application! For large areas, mechanical assistance can be used. Efficient airless paint sprayers have established themselves on the market in recent years. This allows paint to be applied quickly and evenly within a short period of time, which saves not only lots of time, but also money.

3 INTENSE COLOURS

There is a trend in building design towards dark and intense colours on façades. Lots of creative touches emphasise the individuality of the building. These façade paints provide intense shades combined with excellent UV resistance, colour brilliance and a wide range of colours. For long-lasting and intense colours.

4 COVERAGE

Thanks to their unique formulation, Baumit façade paints are extremely resistant to environmental influences. They can therefore prevent damage to the façade and help to protect the building structure for a long time.

5 LONG-LASTING

Baumit façade paints are characterised by their high level of coverage. The high proportion of pigments ensures intense, beautiful and long-lasting colours, even on the first application.

6 UV RESISTANCE

Wind, weather and sunlight can cause façade paints to fade and lose their initial colour over time. In order to prevent this, Baumit façade paints contain high-quality light and weather-resistant pigments, creating façades that gleam, even after many years.

7 COOLPIGMENTS

The use of dark colours to cover the whole façade has previously been limited, mainly because dark shades heat up and fade quickly in the sun. Baumit therefore developed CoolPigments technology. CoolPigments reflect a large proportion of the sunlight to which they are exposed, reducing the surface temperature and enabling fashionable dark colours to be applied over an entire ETICS surface. The new pigments can be mixed into paints and plasters as an additive, which means that all 888 Life colours with a lightness coefficient of less than 20, can be applied over a large surface area on an external thermal insulation composite system.

Nanopor

BAUMIT NANOPOR

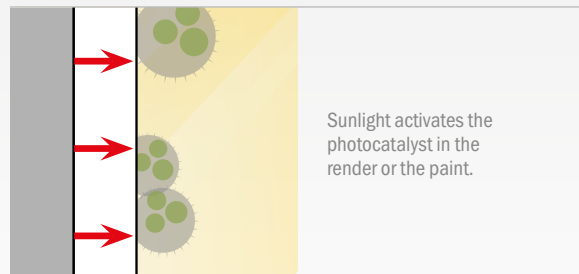

- Self-cleaning
- Photocatalysis
- Anti-ageing treatment for façades

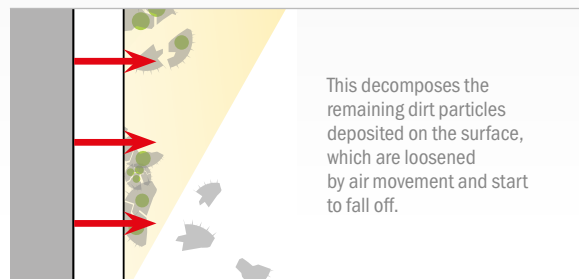

The first aspect to note is that **Baumit Nanopor** has a special microscopically smooth surface with a "nanoporous" structure. These nanopores are too small (1 nanometre = 1 millionth of a millimetre) for dirt particles to get into, making it difficult for them to attach themselves to the surface. Furthermore, the low electrostatic charge of Baumit NanoporColor reduces the contamination of the façade. The few particles of dirt that nevertheless manage to attach themselves are removed from the façade by the evaporation of moisture (air moisture, rain etc.) stored in the hydrophilic surface of Baumit NanoporTop.

Secondly, Baumit NanoporTop and Baumit NanpoColor contain a photocatalyst, creating a further, very efficient self-cleaning effect. The photocatalyst in the paint is activated by daylight. It breaks down the few dirt particles attached to the surface, which are then loosened by the movement of the air and in some cases, fall to the ground. Rain and drying moisture also remove dirt particles and clean the façade. The photocatalyst contained in the façade is not depleted during this process. The result is a dirt-resistant surface that stays beautiful for a long time.

Consumption: ca. 0.32 l/m² for two coats
Yield: ca. 47 m²/15l bucket for two coats

Sunlight activates the photocatalyst in the render or the paint.

This decomposes the remaining dirt particles deposited on the surface, which are loosened by air movement and start to fall off.

Rain and the evaporation of absorbed moisture remove the remaining dirt particles, leaving a clean façade.

Premium

PREMIUM FAÇADE PAINTS

- Premium protection
- Water and dirt repellent
- High coverage

Baumit StarColor is a high-quality, ready-to-use, premium silicone resin façade paint with good coverage and excellent application properties. It is also extremely water-repellent and vapour-permeable and is therefore highly recommended for the base area.

Consumption: Ca. 0.32 l/m² for two coats, Yield: Ca. 47 m²/15l bucket for two coats

- Easy to use
- Low water absorption
- Huge range of colours

Baumit PuraColor is a ready-to-use organic paint for outdoor and indoor use. It is highly water-repellent, weather-resistant and vapour-permeable, as well as easy to wash off and simple to use. Suitable for use on mineral and organic plasters, fillers and concrete.

Consumption: Ca. 0.32 l/m² for two coats, Yield: Ca. 47 m²/15l bucket for two coats

Professional

PROFESSIONAL FAÇADE PAINTS

- User-friendly
- Vapour-permeable
- Water-repellent

Baumit SilikonColor is a ready-to-use façade paint based on tried-and-tested silicone resin, for outdoor use. Highly vapour-permeable, extremely water-repellent, dirt-resistant and universally applicable.

Consumption: Ca. 0.4 l/m² for two coats, Yield: Ca. 37,5 m²/15l bucket

- Breathable
- Mineral
- Specialised for renovation

Baumit SilikatColor is a ready-to-use façade paint based on silicate, for outdoor use. Highly breathable and water-repellent. Can also be used for renovation and for the maintenance of historical monuments.

Consumption: Ca. 0.32 l/m² for two coats, Yield: Ca. 47 m²/15l bucket

- Wide range of colours
- Economical
- Easy to use

Baumit GranoporColor is a ready-to-use façade paint based on synthetic resin, for outdoor use. Vapour-permeable and very water repellent.

Consumption: Ca. 0,4 l/m² for two coatse, Yield: Ca. 37,5 m²/15l bucket

Baumit World of Life

ATTRACTIVE CHOICE

- **888 different possibilities**
- **Intense and beautiful**
- **Endless design variations**

Baumit Life offers an amazing range of 888 creative façade colours. This colour system is as beautiful, wide-ranging and individual as life itself.

For a long time, the individuality of a house was limited to the interior design. But times are changing and nowadays it is different: it is the façade that provides the building with a unique character. Baumit therefore developed Europe's widest and most beautiful range of colours - the Baumit Life system. With 888 different colour shades, it offers almost complete freedom when it comes to façade design.

Whether you prefer delicate pastel shades or intense dark colour, Baumit Life enables unlimited design possibilities. The heart of the Life system consists of 94 main shades, each with an additional 8 colour gradations. The system is rounded off by 6 white tones and 36 MosaikTop top coat renders.

Big Life –

Beautiful, strong and innovative: Our full range of Life colours displayed in a high-quality aluminium cover. All the key information about the colour system is also available in electronic format on the built-in USB stick.

Easy Life –

The entire colour spectrum in a practical format: The little brother of Big Life – this provides the same content on fewer pages.

Taste of Life –

The trend range: An attractive choice of 88 trend colours in a handy size. Including usage examples to inspire creativity and help you decide on the colour.

Baumit Life Service

EXCEED THE LIMITS OF COLOUR

Baumit is there to help you with all your queries. Because ideas with a future require long-term service provision, support is available in every area where it might be required.

1. The strong network: baumit.com

baumit.com provides you with a whole range of information at the click of a mouse. Among many other things, the detailed information, product datasheets, colour designer, colour search and colour sample ordering features will help you to find the exact information that you are looking for.

2. Baumit Infoline

Baumit offers you a customer service package that covers all areas of construction. Our specialists would be very happy to advise you on technical matters and to help you to select the right products.

3. Baumit construction site service

If you have specific requests, Baumit's on-site service is also available to help you. Your advisor will bring suitable experts to your construction project and will address your queries and wishes directly on site.

4. Baumit Extra Services

- Calculating the U-value
- Suggestions for achieving the best possible renovation results
- Original colour samples in tubs
- Sample boards with colour samples already on them
- Theoretical and practical seminars for construction professionals, etc.

5. Samples of all colour products

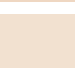

Order your Baumit colour sample and apply it directly onto your façade to test its effectiveness in terms of texture and colour. Baumit samples come in 1 L tubs and will help you to make your decision. For new-build façades and building projects, you may find Baumit sample boards or a Baumit colour suggestion helpful. For construction projects spanning areas greater than 1000 m², the latter is applied directly onto the building by Baumit specialists.

6. Colour/design suggestions

Send us your plan or a photo of your façade, and you will receive three design suggestions for your new home or project.

The shades illustrated are intended as a guide to the colour of the chosen product. An exact match of the shade to the material delivered cannot be guaranteed.

Design Façade Paints

BAUMIT METALLIC

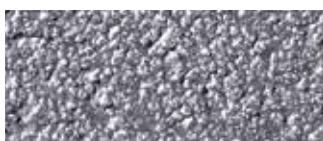

- Elegant glaze
- For decorative highlights
- Metallic-look surfaces

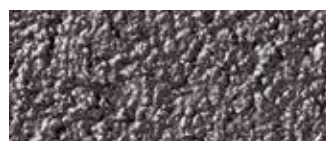

A special surface effect is possible with this highly resistant metallic coating based on synthetic resin. The shiny surfaces create a metallic-look effect on all types of plaster surfaces used outdoors.

Application: Apply a white base coat of Baumit façade paint for a better colour result. After a drying time of at least 12 hours, Baumit Metallic is applied in two steps using a lambswool roller or a paint spraying system.

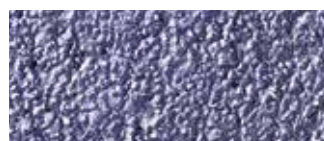

Consumption: approx. 0.3–0.35 kg/m², Yield: approx. 42–50 m²/15kg bucket

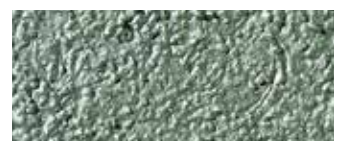

Titan 746M

Platin 747M

Saphir 748M

Smaragd 751M

Gold 753M

Rubin 754M

Bronze 755M

Azurit 756M

LASUR

- Matt finish
- Authentic renovation
- Perfect for surface imitation

This ready-to-use, matt, silicate-bound glaze allows decorative wall designs to be created inside or outside. The glaze is available in eight standard colours.

Consumption: approx. 0.08–0.1 kg/m², Yield: approx. 150–185 m²/15kg bucket

Shine 725L

Sensual 726L

Impulse 727L

Gentle 728L

Solid 729L

Mystic 730L

Fresh 731L

Casual 732L

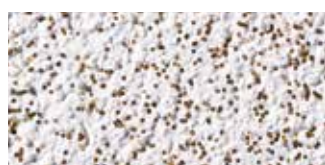

BAUMIT GLITTER

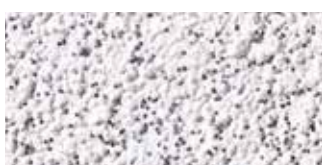

- Sparkling effect in sunlight
- Decorative and exceptional
- Discreet and luxurious

For a special surface finish, apply a final coat of ready-to-use Baumit Glitter, based on synthetic resin. Four different glitter effects create a unique, attractive look that can be applied to any substrate.

Consumption: approx. 0.1–0.15 kg/m², Yield: approx. 100–150 m²/15 kg bucket

Silver 773G

SilverFine 774G

Rainbow 775G

BAUMIT paints can be used on almost all standard building substrates. In order to ensure that the top coat adheres securely, the substrate must be sufficiently sound, dry, stable and free of dust and frost. The substrate must therefore be assessed before the start of the painting work and any necessary substrate preparation must be carried out to bring it up to the required standard.

Substrate

DIRTY

SANDY

ALGAE & MOULDS

DIRTY FAÇADE

Dirt deposits on the surface create a separation layer for subsequent coats. The adhesion of the newly applied paint is then too low.

- Clean the surface using Baumit ReClean. Strong cleaning and grease removal power – suitable for use on all renders!

SANDY FAÇADE

Sandy surfaces reduce the stability of the new coat and can cause the newly applied paint to come off.

- Step 1: Clean the surface, for example using a pressure washer
- Step 2: Stabilise the surface using Baumit ReCompact.

ALGAE & MOULDS

Even if the functionality of a façade is not impaired by the growth of algae and/or fungi, they are very detrimental to the appearance.

- Step 1: Treat the affected area using Baumit FungoFluid
- Step 2: Brush down the façade

PEELING

Before repainting, any peeling or uneven material must first be removed and then any holes or cracks left behind be filled in.

- Step 1: Remove and brush off the affected areas
- Step 2: Apply Baumit MultiPrimer
- Step 3: Stabilise the surface using Baumit MultiContact and Baumit StarTex

Preparation

PEELING

HIGH WATER ABSORPTION

CRACKS

HIGH WATER ABSORPTION

There can be large differences in the absorption of the paint by the substrate, which leads to variations in the appearance of the paint. Spots of chalking can appear on the surface or applied paint can flake off.

- Pretreat with Baumit MultiPrimer to even out the absorbency

CRACKS < 0.5mm

Even small hairline cracks less than 0.5mm wide can cause lasting damage to the fabric of the building over time.

- Pretreat with Baumit FillPrimer to fill the cracks

CRACKS > 0.5mm

Cracks more than 0.5mm wide require urgent action because any moisture that penetrates can result in serious damage.

- Step 1: Scrape out the cracks
- Step 2: Reinforce with Baumit MultiContact and Baumit StarTex

Substrate Preparation

BAUMIT PRIMERS

Baunit MultiPrimer

Water-vapour-permeable primer for stabilising mineral and organic surfaces before the application of all Baunit façade paste renders and paints. Solvent-free.

Baunit FillPrimer

Ready-to-use, fibre-reinforced, all-purpose primer that fills cracks, for outdoor and indoor use. Fills and covers substrate cracks of up to 0.5 mm. Solvent-free.

Baunit FungoFluid

Ready-to-use, water-based solution for the treatment of façades and wall areas affected by fungi and/or algae.

Baunit ReClean

Concentrated cleaning agent with strong cleaning and grease removal power for all renders. Biodegradable. Depending on the degree of soiling, use undiluted or diluted by up to 1:10 with water.

Baunit ReCompact

Primer for stabilising sandy, powdery mineral plasters. Suitable for lime/cement and chalky plasters. Not suitable for exposed masonry!

BAUMIT MULTICONTACT MC 55

- Highly tempered
- Strong bond
- Flexible

Baumit MultiContact can be used both as an adhesive filler and as a remedial plaster. It is ideal for use in extensive façade repairs. Façadepaints can be applied onto it directly, without the need for a surface primer treatment.

Baumit MultiContact is the professional solution for façades requiring more care due to deeper cracks, peeling paint or an uneven surface.

Thanks to its innovative formula, Baumit MultiContact is water-repellent and flexible, making it the ideal reinforcing mortar for use with Baumit StarTex textile-glass mesh. Baumit MultiContact is white and easily textured, and it provides the ideal surface for Baumit Colour façade paints.

Baumit MultiContact can be patterned like a standard plaster and you can add the finishing touch to your façade with one of Baumit's high-quality paints. For a high-class renovation solution, instead of Baumit façade paint, you can apply one of Baumit's high-quality exterior plasters, such as Baumit NanoporTop or Baumit SilikonTop, to the smoothed and primed surface.

**Where can I get help to
choose the right colour
for my façade?**

World of Life

Four new ways to find your colour. The new Baumit Life website provides even more ways to find the perfect colour shade, allowing professionals and private individuals to select by colour, inspiration, trend or philosophy.

The website also provides practical online tools, such as Baumit ColorSearch for finding colours and Baumit ColorDesigner to test how the selected colours and colour combinations will look on the wall of the building. **www.baumitlife.com**

Ideas with a future.
